

# MHR TECHNOLOGIES inc.

Safer, Faster, Efficient School Dismissal Operations

## ORGANIZED CHAOS

School dismissal is a lesson in organized, time consuming chaos. Pickup schedule changes, multi-parent carpools, long lines of cars, inefficient communications, and safety and security require an inexcusable amount of staff hours, parent frustration, and 30 minutes of continuous PA announcements.

### A BETTER WAY

Introducing **School-Pass™** by MHR Technologies. **School-Pass™** uses smart technology to make school dismissal safer, faster, and less stressful for school staff, parents, and students. It takes the chaos out of school dismissal.

### HOW IT WORKS

- **Parents:** Use the secure online *Parent Portal* to easily set a standard schedule of who will pick their children up. They can also create exceptions for playdates, early pickups, after school activities, and more.
- **School Staff:** Use the *School Administration* dashboard to review pickup schedules by child or class.
- **Dismissal Staff:** See simple on-screen status of the entire dismissal process. Pickup vehicles are automatically identified by the **School-Pass™** system when they drive into the pickup line and teachers are automatically notified on-screen when to send specific students to the pickup area.

### FEATURES

- ✓ **Parent ID:** **School-Pass™** automatically identifies the cars in pickup lines and matches them to the students they are picking up.
- ✓ **Quiet Announcing:** **School-Pass™** provides on-screen notification to teachers of which students to send to which pickup area, at what time.
- ✓ **Simple Changes:** Early pickups, carpool changes, and more are input by parents.
- ✓ **Dashboards:** Show everything from cars in line to carpool schedules and dismissal schedules.

...and much more

Parents can use their highway tags in our carpool lines!

## SCHOOL PASS™

“Improvement to safety and security is huge and it is much less disruptive in the classroom.”

CHERYL MURZYN  
(Former School Principal),  
St. Elizabeth Catholic School

Maximize security by using license plate cameras to identify drivers in carpool line (instead of RFID tags)

Optimize traffic flow through drop-off and pickup areas using our integrated traffic engineering services provided by The Traffic Group
